

## 4.4 Supplement Feeding on Lower Quality Fields

### Features:

- Creep gates – allow access for calf's only to creep feed
- M self-feeder
  - Keeps expensive feed out of the elements and lowers labour need as it can store a lot of feed that automatically falls out in the crib as the lambs eat.
  - Ad Lib access to feed
  - Crib is separate, can be replaced
- Round bale feeder
  - Strong and easy to move
  - Can be used for any round bales, silage and any other roughage
  - Minimizes waste
- Water trough allows for easy cleaning and freshwater intake with floating valve
- Bale panels are placed around big pack bales, no need for a lift
- All products are galvanized and rugged to keep a live time

### 3D Layout

### Benefits:

- Ad Lib creep feed for calf's, allows for healthy and speedy rumen development, that will contribute to the weaning percentage and weight. Ensure that vital vitamins and minerals are taken in
- Cows Calf in natural way in extensive grazing, low stress environment

- Additional roughage helps cows with quality milk production and recovery from calving, so she can get into production faster
- Bale panels is great to keep roughage that supplement the needed fibres for rumen function for calf's
- All the equipment can be used in summer and winter, the supplement feeding will only differ as grazing and time in production cycle changes
